

REMOVABLE WALL GRAPHIC

Applying your Wall Graphic from INDUSTRYimages is easy. No glue, water, or messy clean-up is involved, and Wall Graphics are easily removed from most surfaces with no unsightly residue or paint damage left behind.

INSTALLATION

Ensure that the area of the wall where the graphic is to be mounted is smooth, clean and dry. Clean the surface thoroughly and allow for plenty of drying time. Do not use chemical cleaners.

If the product was rolled up, lay out sheets and allow one day for them to flatten out before proceeding.

Place the graphic on a flat surface, face down and gently peel the backing away from top of graphic.

See *Figure 1*

Gently position the graphic on the wall as flat as possible, without pressing it firmly against the wall.

Once it is in proper position use a hard plastic squeegee* to firmly apply to wall, working from the center of graphic outward.

See *Figure 2*

*Squeegees are available from INDUSTRYimages upon request, or you can use any rigid piece of plastic - ideally the thickness of about 4 credit cards. To prevent scratching the printed graphic, we recommend wrapping your squeegee in a thin towel or piece of fabric.

>>The adhesive on the back of your wall graphic is pressure sensitive, so be sure to press firmly for best results.

>>Two people are recommended for the successful installation of larger graphics.
(Larger than 2'x2')

>>If you are dissatisfied with the placement of the graphic, gently peel it off the wall and start again.

>>If you are concerned about the graphic damaging your wall, simply use the test strip provided. Apply the strip to your wall in an area that is easily covered or repaired, and leave for 24 hours. Remove by peeling the graphic away from the wall.
